Kaplan-Meier Survival Estimates

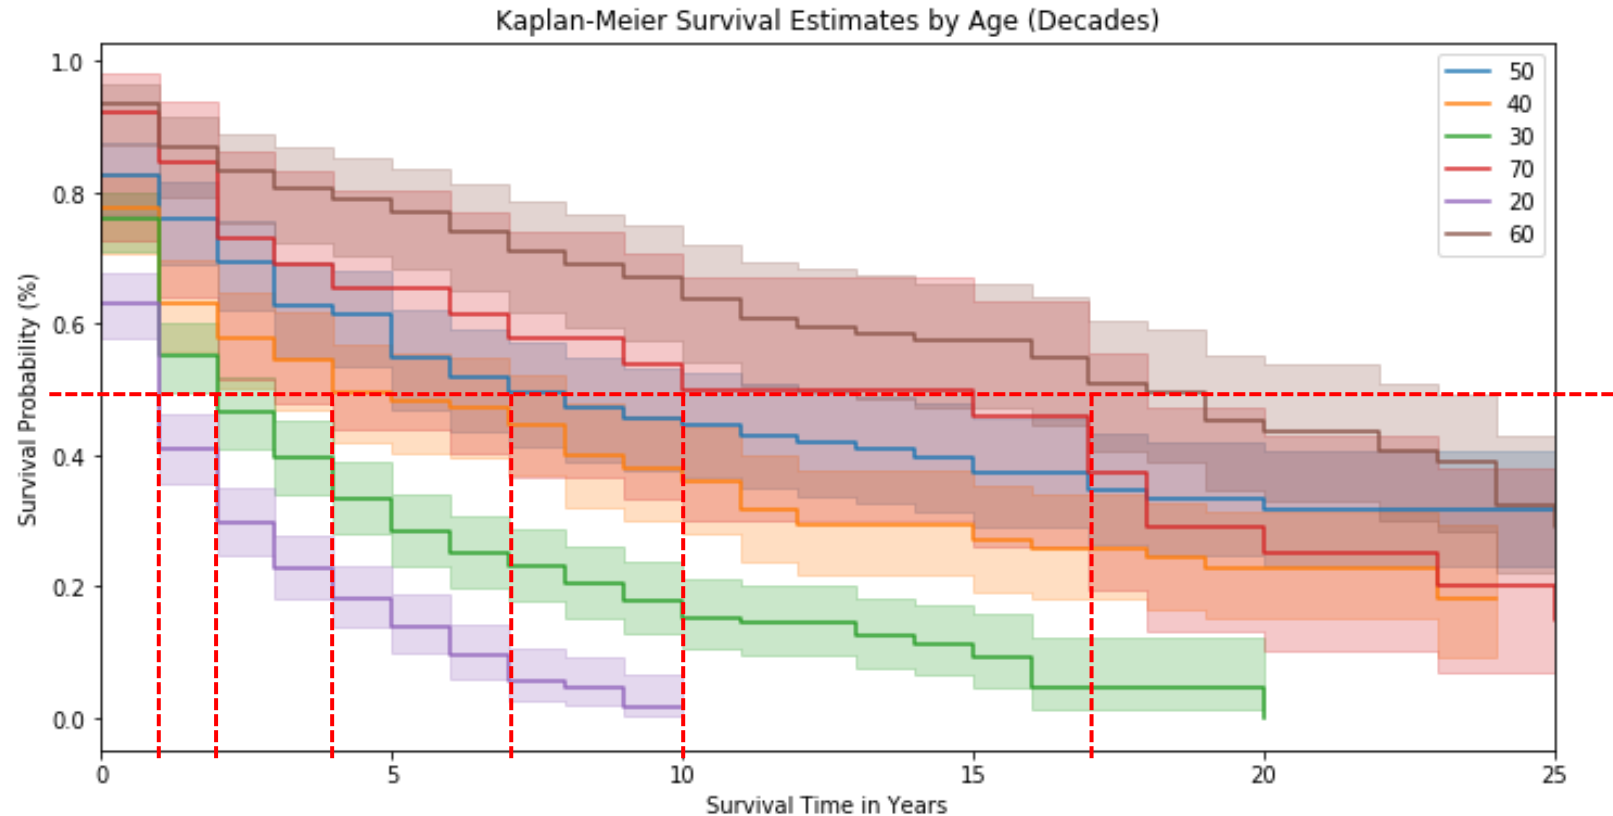

- At year 0, the survival probability is 0.75 (75% of the employees are alive).
- At year 2, the probability of survival is approximately 50% (The median survival is approximately 2 years).
- At year 5, the probability of survival is approximately 38%.

Kaplan-Meier Survival Estimates by *Gender*

- At year 0, the survival probability is 0.75 for both genders.
- The median survival is approximately 2.5 years for both genders, suggesting a similar survival rate for male and female employees.

Kaplan-Meier Survival Estimates by *Age (Decades)*

- The median survival differs greatly by the employee's age. Usually, the older the employee is, the longer the employee's survival time is.
 - **20s**: 1yr, **30s**: 2yrs, **40s**: 4yrs, **50s**: 7yrs, **60s**: 17yrs, **70s**: 10yrs

Kaplan-Meier Survival Estimates by *Termination Category* (*Work related vs. Personal*)

- At year 1, the probability of survival is approximately 50% for both termination reason categories (work-related and personal).
- Employees who left due to work-related reasons have a lower probability of surviving than those who left due to personal reasons.

Kaplan-Meier Survival Estimates by *Termination Category* (*Voluntary vs. Involuntary*)

- At year 1, the probability of survival is approximately 50% for both termination reason categories (voluntary and involuntary).
- Employees who left due to voluntary reasons have a lower probability of surviving than those who left due to involuntary reasons.

Kaplan-Meier Survival Estimates by *Department*

- The median survival differs greatly by department.
 - **Culinary & Dining Services:** 1yr
 - **Certified Nursing Assistant:** 1yr
 - **Licensed Practical Nurse:** 3yrs
 - **Maintenance & Security:** 6yrs
